

What is prompt, prompting, prompt engineering, chat, and enterprise prompting

Covered in the video:

- *What is a prompt, what do we mean by prompting, and how does prompt engineering tie it all together?*
- *The distinction between chat and enterprise prompting.*

Let's recap:

- — A prompt is the actual text/instruction you give to AI; prompting is the act of writing prompts; prompt engineering is the systematic approach to creating and refining prompts.
- — Two main types: enterprise prompting (for business applications at scale, needs to be highly reliable) and chat prompting (direct conversational interactions, more flexible).
- — Enterprise prompting handles millions of uses and must account for edge cases and diverse inputs; chat prompting is for immediate, specific tasks with real-time iteration.
- — This course focuses on chat prompting using **Claude.ai**, not enterprise prompting.

Let's recap:

- — Important distinction: don't spend time on enterprise prompting resources if your primary use case is chat-based interactions.
